Stories

As a user, I want to view all canteens so that I can explore available options.
As a user, I want to view the menu of a canteen.
As a user, I want to search for food items.
As a user, I want to filter food by price and rating.
As a user, I want to register and log in using university credentials.
As a user, I want to submit, edit, and delete reviews.
As a user, I want to upload images with my review.
As a moderator, I want to review and delete inappropriate content.
As an admin, I want to manage canteens and food items.
As a user, I want to place an order from a canteen so that I can get food delivered inside campus.
As a user, I want to view available delivery requests so that I can choose an order to deliver.
As a user, I want to accept a delivery request so that I can deliver food for another student.
As a user, I want to update delivery status so that the ordering student can track progress.
As a user, I want to confirm delivery completion so that the order can be marked completed

1. Sprint Plan Overview

Sprint 1 – Project setup, database, and core models
Sprint 2 – Authentication and browsing functionality
Sprint 3 – Review system, moderation
Sprint 4 – Order placement and delivery system

2. Sprint Details

Sprint 1: Project Setup and Database

Goal: Set up Django project and database structure.

Task 1: Create Django project and initialize apps (users, canteens, foods, reviews)

Task 2: Design and implement database models (User, Canteen, Food, Menu, Review)

Task 4: Run migrations and configure database

Task 5: Set up Django admin panel and insert sample data

Deliverable:

Working backend with database and admin interface.

Sprint 2: Authentication and Browsing Functionality

Goal: Implement user authentication and core browsing features.

Task 1: User registration using university credentials

Task 2: Login and logout functionality

Task 3: Display list of canteens, menu for selected canteen, food items

Task 4: Implement search functionality and filter (price, rating)

Deliverable:

Users can log in and browse food items.

Sprint 3: Review, Moderation

Goal: Complete review system and finalise application.

Task 1: Submit Edit and Delete review (rating and comment)

Task 2: Calculate and display average rating

Task 3: Implement image upload

Task 4: Develop moderation system for review approval/removal

Deliverable:

Review and Moderation System

Sprint 4: Order Placement and Delivery System

Goal: Implement dynamic order and delivery system.

Task 1: Create order placement interface

Task 2: Allow user to select food and canteen

Task 3: Add quantity and delivery location

Task 4: Set order status as "Order Placed"

Task 5: Display available delivery requests

Task 6: Allow users to accept delivery requests and order

Task 7: Allow ordering user to confirm delivery

Deliverable:

Working order and delivery system
